Elastic molded parts made from eco-friendly rubber granules

# Welcome to HET Elastomertechnik GmbH!

As experts in elastomer technology, we have been producing and selling elastic products made from recycled material for over 30 years. We cover the following areas: Recreational facilities, playgrounds, rail traffic, molded parts for industrial and construction plants, and safety engineering.

Our ELTECPUR® sport products provide the safety and protection that is essential in these areas. As a graduate with a degree in exercise and sports science, I know from my own personal experience how important flooring is when it comes to sports.

As you look at the following pages, you will learn about our ELTECPUR® sport products and solutions for fitness and their applications. Our team of experts is happy to advise you in all areas and can also provide you with customized solutions upon request. We look forward to welcoming you as one of our customers.

Yours,

## ELTECPUR® sport Fitness

The fitness and sports flooring of HET Elastomertechnik GmbH offers you protection against injuries and is gentle on your joints and ligaments. Whether they are installed in the free weights

area or CrossFit zone, under exercise equipment in spinning studios or at ice-skating rinks: ELTECPUR® sport has the right products made of rubber granules for any area you have. ■

### Your advantages at a glance:

- Highly resilient, abrasion-resistant
- Hard-wearing and durable
- Non-skid and joint-friendly
- Eco-friendly and sustainable
- Cost-effective, with low maintenance costs
- Resistant to weather and temperature
- Quick and easy laying
- Easy cleaning and care
- Safe and low in emissions

# Fitness Mats

ELTECPUR® sport Fitness Mats are suitable for installing under fitness equipment and spinning bikes so they maintain a stable position and don't slip or move. They also protect the floor from the impact of weights and barbells. Their sound-absorbing, vibration-reducing and joint-friendly properties are additional advantages of our products. ELTECPUR® sport Fitness Mats are suitable for both indoor and outdoor use. Whether indoors or out, they offer reliable and low-maintenance protection for many years to come. In addition, the ELTECPUR® sport Fitness Mats can also be used as flooring for ice rinks, as they are non-skid, while they simultaneously protect the blades of the skates.

The material properties of our ELTECPUR® material make it a versatile product that can be used in the areas of fitness and sports as well. Its elasticity and impact resistance in particular, plus its durability and eco-friendliness all play a decisive role here. The sturdy and water-resistant ELTECPUR® sport Fitness Mats are made of high-quality PU-bonded recycled rubber granules and are the ideal floor covering for the fitness sector and other recreational facilities. The difference between ELTECPUR® sport Premium Fitness Mats and ELTECPUR® sport Fitness Mats is that the Premium Mats are made with finer rubber granules and are even more densely compressed. The use of finer rubber granules

**Dimensions:**

Sizes: 200 x 100 cm  
 Thickness: 0.5 | 0.8 | 1.0 | 1.5 | 2.0 cm

**Usage examples:**

- Spinning studios
- Cardio and CrossFit
- Ice-skating rinks
- Trampoline parks
- Underneath exercise equipment

**Additional versions and sizes are possible upon request.**

gives the surface of our premium products a smoother appearance. They were specially developed for the design and installation of floors in the area of fitness (such as CrossFit, equipment training or in the free weights area) and weight training. Depending on the version, they contain a percentage of colored EPDM rubber granules. The standard selection includes four different EPDM colors and five different color densities: ■

## Elastic Tiles

Our products for the areas of personal and commercial fitness are similar to our Fall Protection Tiles, but are compressed more densely, and are hard-wearing enough to meet the high demands of fitness centers. ELTECPUR® sport Elastic Tiles protect the floor underneath from the impact of the weights, are non-skid and are easy on the joints. The sound-absorbing, vibration-reducing and joint-friendly properties of our products offer even more advantages. With our ELTECPUR® sport Elastic Tiles, you ensure a safe, quiet and comfortable atmosphere in your fitness center or weight room. ELTECPUR® sport Elastic Tiles have been proven to be particularly low in emissions and meet the requirements of the AFSSET Class A+ assessment framework as well as the much more rigorous AgBB assessment framework. Our ELTECPUR® sport Elastic Tiles are also available with an EPDM top layer, allowing you to individually design your fitness rooms. You can choose from many different colors, as well as the popular multicolor design with various color combinations and different color densities. Our Premium Elastic Tiles are a version of the ELTECPUR® sport Elastic Tiles and have also been specially developed for the design and installation of floors in the fitness sector (such as CrossFit, equipment training or in the free weights area) and weight training. They are made of high-quality PU-bonded recycled rubber granules and the difference between

them and ELTECPUR® sport Elastic Tiles is that they are even more densely compressed and are made with finer rubber granules.

As a result, the surface of our premium products appears smoother. Both ELTECPUR® sport products can be used both indoors and outdoors, and offer reliable and low-maintenance protection for

#### Usage examples:

- Fitness centers
- Free weights
- Outdoor fitness parks
- Cardio and CrossFit
- Calisthenics

many years to come. The standard version of the Elastic Tiles is drilled four times, delivered with connectors and available in different sizes.

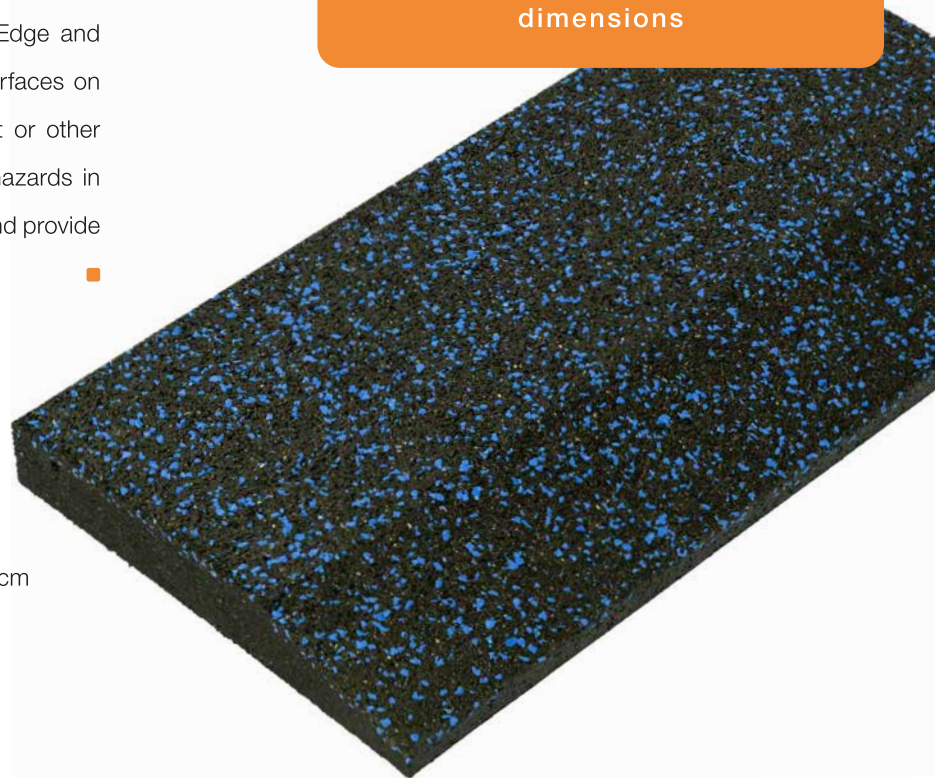

With the ELTECPUR® sport Design Tiles, you can customize your indoor sports surface even more. The Design Tiles are printed individually in accordance with your specifications and preferences, for instance with your sports club logo, your city's coat of arms, your company's logo, etc. ■

## Accessories

### Beveled Edge Element

We recommend our ELTECPUR® sport Beveled Edge and Beveled Corner elements as borders for elastic surfaces on load-bearing substrates such as concrete, asphalt or other solid floor coverings. They help to avoid tripping hazards in fitness studios, at riding arenas and in other areas and provide a safe transition. ■

Available in different colors and dimensions

#### Dimensions:

Sizes: Beveled Edge Element 50 x 25 cm, 100 x 25 cm

Beveled Corner Element 25 x 25 cm

Beveled Corner Interior Element 50 x 50 cm

Thickness of all varieties: 3 | 4 | 5 cm
